T. Daniels Consulting's Total Security Suite

Complete network protection in a single, easy-to-deploy solution.

Total Security.

A stateful packet firewall, while essential, simply isn't enough anymore. The reality is that every network needs a full arsenal of scanning engines to protect against spyware and viruses, malicious app and data leakage – all the way through ransomware, botnets, advanced persistent threats, and zero day malware. A true network security solution will address all aspects of threat prevention, detection, correlation, and response – today, and as those threats evolve. T. Daniels Consulting's Total Security Suite not only provides the most complete suite of unified security controls on the market today but has consistently been the first to offer solutions for addressing new and evolving network threats including, but not limited to, advanced malware and ransomware.

Total Simplicity.

It's more than just about security scanning engines, though. At T. Daniels Consulting, we believe simplicity is the key to successful adoption of technology. As such, all of our products are not only easy to initially configure and deploy, they are also designed with an emphasis on centralized management, making ongoing policy and network management simple and straightforward. Security is complex, managing it doesn't have to be.

Total Performance.

All businesses, regardless of size, need to pay attention to performance. Slow security scanning times can cripple a network's ability to handle high-volume traffic. Some companies are forced to decrease protection to keep performance strong, but T. Daniels Consulting's solutions never make you choose between security and speed. Leveraging the power of multi-core processing, T. Daniels Consulting's platform is engineered to deliver the fastest throughput when it matters – with all security controls turned on. Our platform can run all scanning engines simultaneously for maximum protection while still maintaining blazing fast throughput.

Total Visibility.

From the board room to the branch office, critical decisions about security often need to be made quickly before damage is done. Furthermore, you need to know what's happening not just in the network, but on your device inside and outside of the firewall as well. Visibility is about more than data. Visibility is achieved when that data is converted into easily consumable, actionable information. The addition of T. Daniels Consulting's Total Security Suite provides continuous event monitoring, detection and remediation of threat activity on the endpoint. T. Daniels Consulting's visibility platform takes the data from all devices across your network and presents that data in the form of visually stunning, immediately actionable information. Using this platform, T. Daniels Consulting can identify behavioral trends, pinpoint potential network threats, block inappropriate use, monitor network health and much more.

T. Daniels Consulting Security Services

T. Daniels Consulting offers the most comprehensive portfolio of network security services, from traditional IPS, GAV, application control, spam-blocking, and web filtering to more advanced services for protecting against advanced malware, ransomware, and the loss of sensitive data. T. Daniels Consulting also offers a full suite of network visibility and management services.

FUNDAMENTAL SECURITY SERVICES

Intrusion Prevention Service (IPS)
Uses continually updated signatures to scan traffic on all major protocols to provide real-time protection against network threats.

Reputation Enabled Defense Service (RED)
Cloud-based reputation look-up service protects users from malicious sites and botnets, while dramatically improving web processing overhead.

Network Discovery
A subscription-based service that generates a visual map of all nodes on your network so you can easily see where you may be at risk.

WebBlocker URL Filtering
Automatically blocks known malicious sites, with granular content filtering tools to block inappropriate content and increase productivity.

Application Control
Allow, block, or restrict access to apps based on department, job function, time of day – then see in real time what's being accessed and by whom.

Gateway AntiVirus (GAV)
Continuously updated signatures identify and block known spyware, viruses, trojans, and more – including new variants of known viruses.
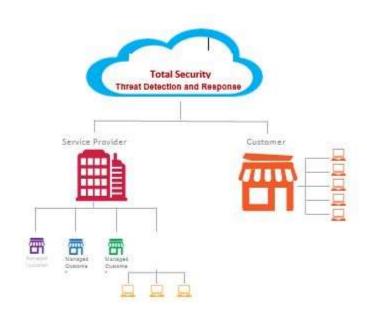

spamBlocker
Real-time spam detection. Our spamBlocker is so fast and effective, it can review up to 4 billion messages per day.

A Unified Approach to Network Security

SMBs and Distributed Enterprises continue to fall victim to advanced threats that have serious impact on business operations and continuity regardless of existing security deployments. No single security control, or subset of controls, is sufficient. The more stages of an attack you're enabled to protect against, the more effective your overall defense is, even when new threats bypass one defense.

With the Total Security Suite, organizations of all sizes can benefit from enterprise grade prevention, detection, correlation and response from the perimeter to the endpoint. ThreatSync, our Cloud-based threat correlation and scoring engine, collects network event data from several security services on the platform, including API Blocker, Reputation Enabled Defense, Gateway AntiVirus and WebBlocker. This is correlated with threat activity detected via the HostSensor and enterprise grade threat intelligence to provide a unified view of your environment, and assign a comprehensive score based on threat activity.

ADVANCED SECURITY SERVICES

APT Blocker – Advanced Malware Protection

Relies on an award-winning next-gen sandbox to detect and stop the most sophisticated attacks including ransom- ware and zero day threats.

Dimension Command

Access to a host of network control features including one-click configuration changes, with access to individual appliances through a web UI and VPN management tools.

Data Loss Prevention (DLP)

Prevents accidental or malicious data loss by scanning text and common file types for sensitive information attempting to leave the network.

Threat Detection and Response

Correlate network and endpoint security events using threat intelligence to detect, prioritize and enable immediate action to stop attacks.

IntelligentAV™

IntelligentAV is a signature-less anti-malware solution that relies on artificial intelligence to automate malware discovery. Leveraging deep statistical analysis, it can classify current and future malware in mere seconds.

Access Portal

Provides central location for access to Cloud-hosted applications, and secure, clientless access to internal resources with RDP and SSH.

DNSWatch™

Reduce malware infections by blocking malicious DNS requests, redirecting users to information to reinforce security best practices.

The Power of Visibility

T. Daniels Consulting offers a Cloud-ready network security visibility solution that comes standard with every T. Daniels Consulting network security platform. It provides a suite of big data visibility and reporting tools that instantly identify and distill key network security threats, issues and trends, accelerating the ability to set meaningful security policies across the network. Activation of this feature unlocks access to a variety of network control features including, but not limited to, one-click configuration changes, the ability to jump back to previous configurations, direct access to individual appliances through a web UI, and VPN management tools. Knowledge is power and visibility provides knowledge.

One Appliance, One Package, Total Security

Simplicity is our mission at T. Daniels Consulting and that mission extends beyond how the product is built and how it is packaged. While all of our services are offered a la carte, we have worked to develop two packages that simplify the decision-making process. The Total and Basic Security Suite packages are available:

- The Basic Security Suite includes all of the traditional network security services typical to a UTM appliance: IPS, GAV, URL filtering, application control, spam blocking and reputation lookup. It also includes our centralized management and network visibility capabilities.

- The Total Security Suite includes all services offered with the Basic Security Suite plus advanced malware protection, data loss protection, enhanced network visibility capabilities, a secure access portal, and the ability to take action against threats right from Dimension, our network visibility platform.

About T. Daniels Consulting

T. Daniels Consulting is the only Microsoft Certified Partner dedicated to providing IT Services to Small and Medium-sized organizations throughout Eastern Michigan. Our seasoned engineers have an average of more than 10 years' experience in IT service and consulting working with small business and possess an array of specialized certifications uniquely designed to benefit small and medium organizations. Backed by more than 25 years of experience, T. Daniels Consulting is "Fortune 500" level technical expertise and experience that is exclusively dedicated to unique needs of your small or medium business.
